

What will you heal with HEALx?

The Results Speak for Themselves

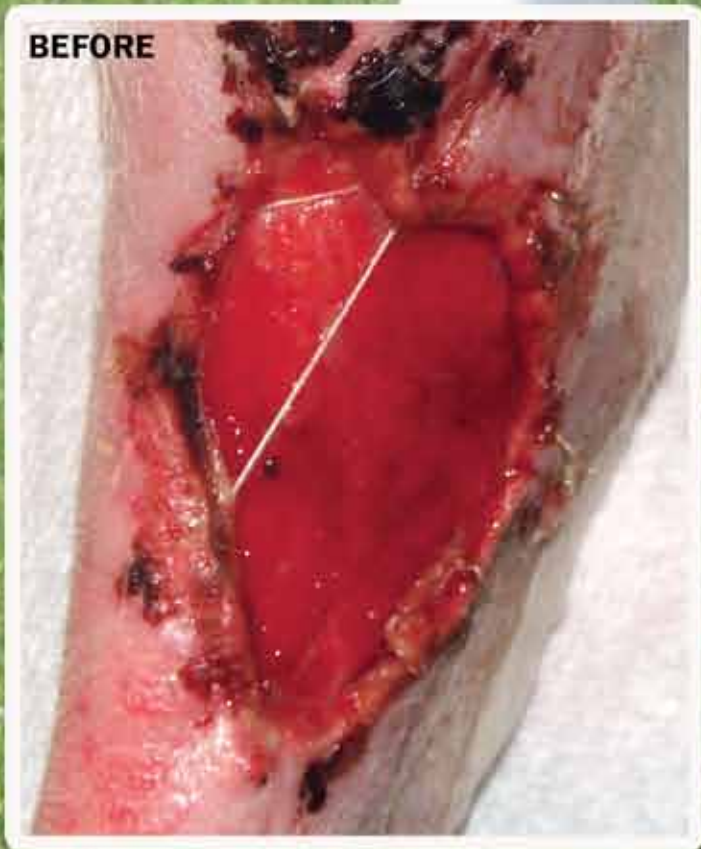

The reason HEALx products get the positive results seen in animals is simple: they are made with unadulterated, unrefined, whole food ingredients. This is very important in how the body uses them and supports health. You can actually see the difference between an animal that uses whole food versus synthetic supplements by performing a full physical examination and evaluating the biological status of the animal.

The pictures in this book are a tiny sampling of the real results achieved with HEALx.

SUCCESS STORIES

CHRONIC SKIN CONDITION

"My cocker spaniel was diagnosed with discoid lupus. Her nose has been scabby and raw. The vet gave us HEALx Booster. It's been 1 week and her nose looks absolutely beautiful. It is amazing that her nose is about completely healed—first time in years."
- Amy G., Michigan

BURNS ON THE FEET

"HEALx Soother Plus works wonderfully. Within 2 days my border collie's burns from the sand were completely healed and I was able to take him to class the following night and run him outside without any problems at all."
- Lesa, Canine Performance Events Agility Judge

WEIGHT GAIN, IMPROVED SKIN

"I found HEALx Booster to be very beneficial. The kittens were very amenable to taking it. I liked the results I saw — faster weight gain, wonderful feel to the skin."
- Karla, Katteycasa Sphynx Cattery

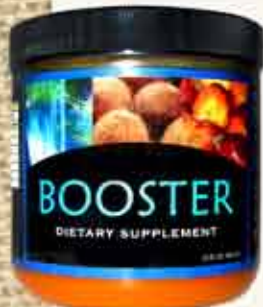

SKIN INFLAMMATION

"My show dog Doc had his folliculitis between his toes rear its ugly head again. My veterinarian started using HEALx Soother Plus on him. It started Sunday and today is Thursday and it's almost gone."
- Kristina E., California

INFLAMMATION AND BRUISING

"My Persian cat had extensive bruising and swelling most noted on his front legs, which were purple, red and very swollen. I used the HEALx Soother Plus, and I was AMAZED to find that by the morning his legs looked WONDERFUL. The redness was gone as were the purple marks."
- Sheri D.

HOT SPOTS

"My Pomeranian continually had hot spots on her back as well as health problems. I bought Booster, and it took a few weeks to completely heal, but she did and I use it regularly now. She is now the picture of health and hasn't been sick in two years."
- Rosemary

SEVERE ALLERGIES

"I have a 1-year-old German Shepherd that has severe environmental and food allergies. The dermatologist wanted Addy on fish oil but she was allergic to fish. After the 2nd jar of Omega-3 Booster I noticed Addy's coat becoming silky, shiny and so much more healthy. The black fur on her back is so shiny that certain times it looks almost blue. She still is battling allergies, but I see improvement with your product."
- Amy White & Addy

MRSA, OTHER SKIN DISORDERS

"My cockapoo was always on antibiotics or antifungals for his skin problems. Then he had MRSA. He was put on Booster Concentrate, and since then seems to be doing beautifully!"
- Cheryl Zuehlsdorff, North Carolina

HORMONAL-RELATED ALOPECIA

"Many ferrets develop adrenal gland tumors after 3 years of age. The most common clinical signs are seasonal lumbar and tail alopecia in both males and females, an enlarged vulva in females and an enlarged prostate in males. In this case, a ferret received no hormonal treatment because it recovered well with only the Sunshine Factor."
- Sergio Sarmiento Valiente, DVM, Spain

BEAUTIFUL COATS IN DOGS AND CATS

"I have been feeding Booster to my 2 terriers and my cat for almost 2 years, and their fur is soft, full-bodied and beautiful."
- Jeanette Schmitt, North Carolina

DOG WITH ITCHY, IRRITATED SKIN

"Soother Plus works great for skin irritations & scabs on my dog. What a relief to use something that stops his itch quickly."
- Ilene M. Rodriguez, Florida

BRONZING OF FEATHERS AND BILATERAL CATARACTS

"This Amazon was given Sunshine Factor. After 4 months, a dramatic change in plumage, and a physical examination revealed a 50% reduction in the cataract size."
- Thomas Bankstahl, DVM, Michigan

SKIN LESIONS

"A ferret presented with unusual skin lesions, but the cause could not be determined. Empirical antibiotic therapy did not resolve the issue. HEALx Booster was added to the ferret's diet. The ferret's skin and coat improved, and eruptions of the skin lesions became rare. Presently, the ferret has been clear of lesions for 2 months."
- Sergio Sarmiento Valiente, DVM, Spain

DOG GIVEN A BOOST

"My dog was diagnosed with laryngeal paralysis, and I started him on Booster, Soother Spray and Soother Plus. He became active and hasn't had an attack since."
- Becky S., Tennessee

SUSTAINABLE™
PALM OIL

RABBIT ABSCESSSES

"We switched from manuka honey to Soother Plus and have had much better results with these often stubborn abscesses. Also, no need to pack with gauze when using the Soother Plus."

- Laura George, DVM, Candor, New York

RABBIT PODODERMATITIS

"A rabbit was presented with foot pads that exhibited dermatitis. Soother Plus was applied to the wounds. The hocks were so severely affected they had to be bandaged. The rabbit was also given Sunshine Factor."

- Dr. Laura George and Dr. Jennifer Saver, New York

HEDGEHOG WITH QUILL AND SKIN DISORDERS

"Snarf (my hedgehog) LOVES Sunshine Factor, and it has completely healed his quills and skin!! It is a miracle cure! He is a different hedgegie after just one month on Sunshine Factor!"

- Cindy C., Canada

FEATHER PICKING

"My male eclectus was a former feather picker. I tried everything from misting and vitamins but to no avail. Now after Sunshine Factor, those sparse feathers are now handsome."

- Rob W.

UPPER RESPIRATORY INFECTION FROM MYCOPLASMA

"My rats showed severe clinical signs of suspected *Mycoplasma*, including sneezing, wheezing and difficulty breathing. The veterinarian recommended Booster. The clinical signs completely disappeared and have not returned. The traditional treatment (enrofloxacin and doxycycline) provided only temporary relief."

- Victoria Staniek

NON-HEALING WOUND IN A CHINCHILLA

"A chinchilla presented with an ulcerated area. Surgery was performed and the tissue was resected. Histopathology revealed severe, diffuse, pyogranulomatous and fibrosing dermatitis and cellulitis with degenerate neutrophils suggestive of bacterial infection. Soother Plus was applied topically, which controlled pruritus and self-excoriation throughout the healing process without the use of an Elizabethan collar."

- Thomas Bankstahl, DVM, Michigan

PAPILLOMAS IN A MACAW

"Our macaw with papillomas and a multitude of other issues has not had laser surgery in over 3 years since having had him on Sunshine Factor or Booster. Before, he was getting laser surgery every 6-8 months as the polyps grew out of his vent. This in turn has saved me thousands of dollars. My birds are the healthiest they have ever been."

- Joanne Alexander Horne, Simply Parrots

MITE INFESTATION

"A guinea pig presented with mite infestation. Treatment included HEALx Booster. In my experience, animals with mites improve much faster with the Booster than with an ivermectin injection alone."

- Sergio Sarmiento Valiente, DVM
